Computer Science undergraduate with hands-on experience in **AI/ML, Computer Vision, and Full Stack Development**. Skilled in developing real-time AI applications using **Python, Flask, TensorFlow, PyTorch, OpenCV, and MediaPipe**. Experienced in building scalable web applications, **RESTful APIs**, face recognition systems, **anti-spoofing solutions**, and computer vision-based projects through internships and practical project development.

WORK EXPERIENCE

AI Intern

At EONMED (NOIDA)

Jun 2025 - Sept 2025

- Worked on **practical AI and Computer Vision applications** during internship.
- Developed computer vision and speech-processing applications using **TTS/STT technologies**.

Software Developer Intern

At Appinventiv Technologies Pvt. Ltd.

Sept 2025 – Nov 2025

- Worked as a **Full Stack Developer**, contributing to the enhancement and development of web applications based on client requirements. Responsibilities included integrating chatbot solutions, implementing new features, and optimizing existing functionalities.
 - Developed key projects such as an **organic vegetable e-commerce platform** and an **ERP system for coaching institutes**, ensuring scalability and user-friendly design.
-

PROJECTS

Virtual Heart Rate Monitor

- This project uses **pyVHR and MediaPipe** to estimate and **visualize heart rate (BPM)** from facial videos, using **computer vision and signal processing**.
- It tracks facial landmarks with **MediaPipe**, extracts physiological signals using **pyVHR**, and **overlays real-time BPM values** on the video for intuitive visualization.
- **Github** - <https://github.com/23F3003917/Virtual-Heart-Rate-Monitor>

QUIZ - MASTER

- Developed a multi-user exam preparation platform with role-based authentication and quiz management features.
- Built backend APIs and database integration using Flask and SQLite.
- **TechStack - Python , Flask , Jinja 2 , SQLite , HTML , CSS**
- **Project Link** - <https://drive.google.com/file/d/1IQbeuGclAKxJ1wvUA0ICyNNFISZDI4P6/view?usp=sharing>

Face Recognition Attendance Management System

- The system uses your webcam to **detect and recognize faces in real time**, verifying both **face and voice liveness**. When a registered user is identified, it automatically logs their name and timestamp in an attendance file — saved in a **structured CSV format** for easy Excel export.
 - **Github** - <https://github.com/23F3003917/Face-Recogn-Attendance-Sys>
-

Vid-Vision

- Vid - Vision solves the problem of expensive **motion capture** by offering an affordable,
 - software-based solution that uses just a phone or webcam.
 - Developed a **low-cost motion capture system** using real-time **body landmark detection**.
 - Implemented **webcam-based motion tracking** for movement analysis applications.
 - **Project Link** - <https://devfolio.co/projects/vidvisiond-ac20>
-

EDUCATION

- **B.Tech** in Computer Science & Engineering (AI/ML)
IMS Engineering College | 2022 – 2026
SGPA: 7.9/10
 - **IIT Madras - Department of Management Studies**
BSc Degree Program | 2023 - 2026
CGPA : 7.20 / 10
-

TECH - SKILLS

- **Prog Lang** : Python, SQL
 - **Backend Dev** : Flask, Jinja2, RESTful APIs
 - **Frontend Dev**: HTML5, CSS3, React.js, Vue.js
 - **AIML Frameworks** : TensorFlow, PyTorch
 - **Databases**: SQLite, MySQL
 - **Tools & Technologies**: Git, GitHub, API Integration, OpenCV, Mediapipe
-

ACHIEVEMENTS

- IIT Madras **Data Science Foundational Level**
 - IITM **Data Science Diploma Level**
 - Developed and **implemented real-time Virtual Heart Rate** Monitoring and Face Anti-Spoofing systems using **Computer Vision and Deep Learning** techniques.
 - Hackathons Finalist
-
